## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kurokawa et al. 6,516,915 in view of Ballard.

Kurokawa et al. discloses a power steering apparatus comprising:

a steering system including a rack and pinion assembly 4,5;

an electric motor 8 producing steering assist torque corresponding to steering torque applied to said steering system;

and a worm gear mechanism transmitting the steering assist torque to the steering system,

wherein said worm gear mechanism includes a worm 9 operatively connected to said electric motor and a worm wheel 10 operatively connected to said steering system and meshing with said worm, and said worm wheel being made of a resin.

Kurokawa et al. discloses the claimed invention except the worm is not single threaded.

It is known in the art, for example as disclosed by Ballard (column 4 lines 7-10) to use a worm which is single threaded, in order to minimize back drive.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kurokawa et al. by using a single thread worm, in view of Ballard, in order to minimize back drive.

#### ***Allowable Subject Matter***

4. Claim 1 is allowed.
5. Claims 3-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

6. Applicant's arguments filed 1 September 2004 have been fully considered but they are not persuasive. Regarding claim 2, applicant has argued that "the problems which Ballard is attempting to solve is a problem which exists with rack and pinion systems. Claim 2 requires a steering system with a rack and pinion assembly." The examiner does not dispute this, however, Kurokawa et al. clearly discloses a rack 5 and pinion 4 assembly, as shown in Fig. 1.

***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
